## Centralized audio scenario

## Existing coax scenario (distributed audio)

Live sources

Standard network  
(cat5,  
coax, or  
wireless)

Viewing /  
listening  
areas

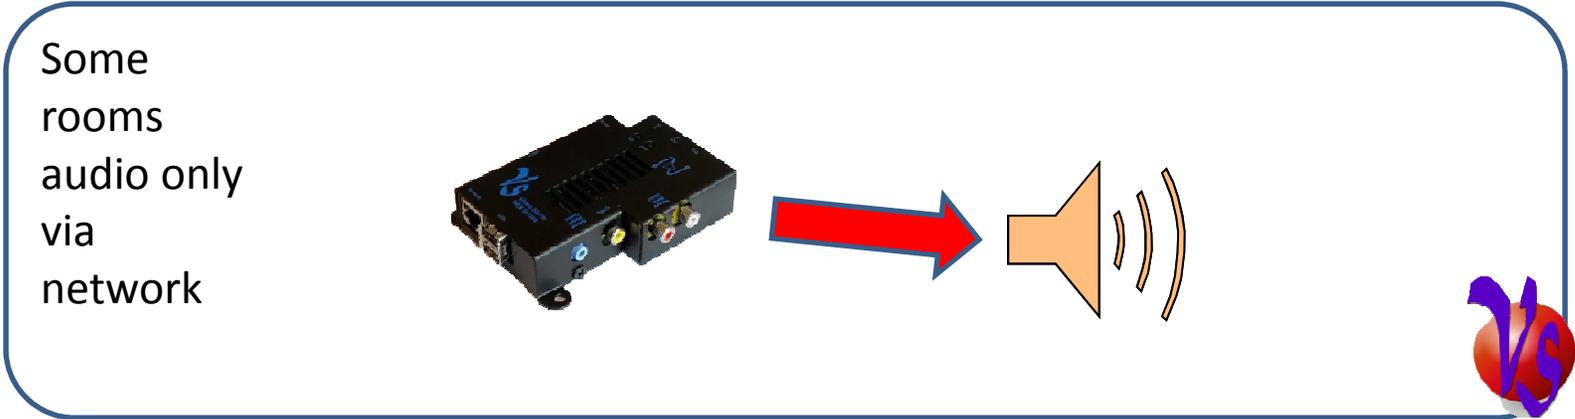

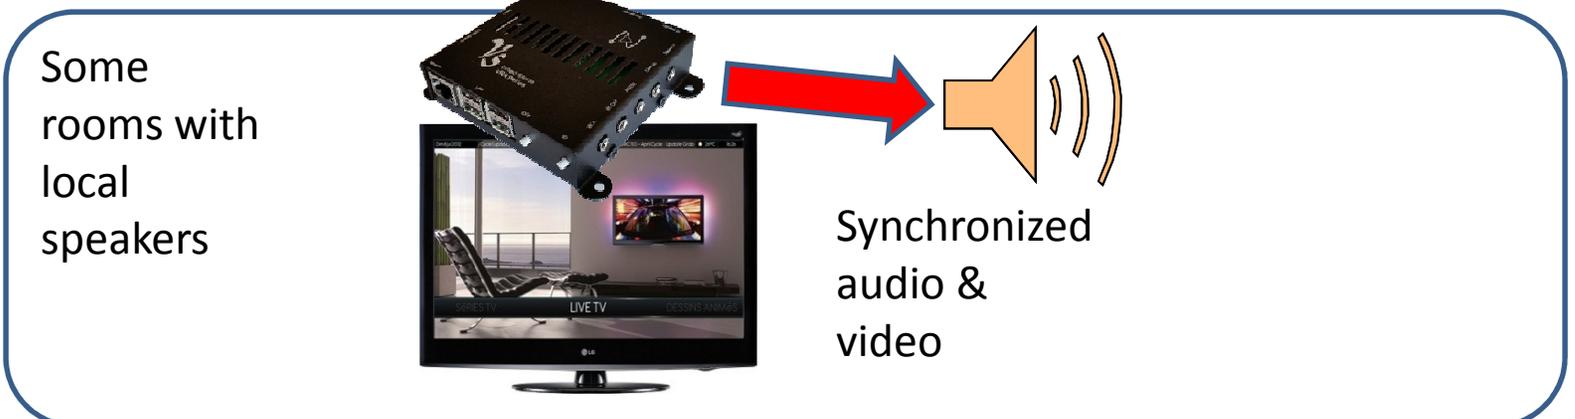

Synchronized  
audio & video

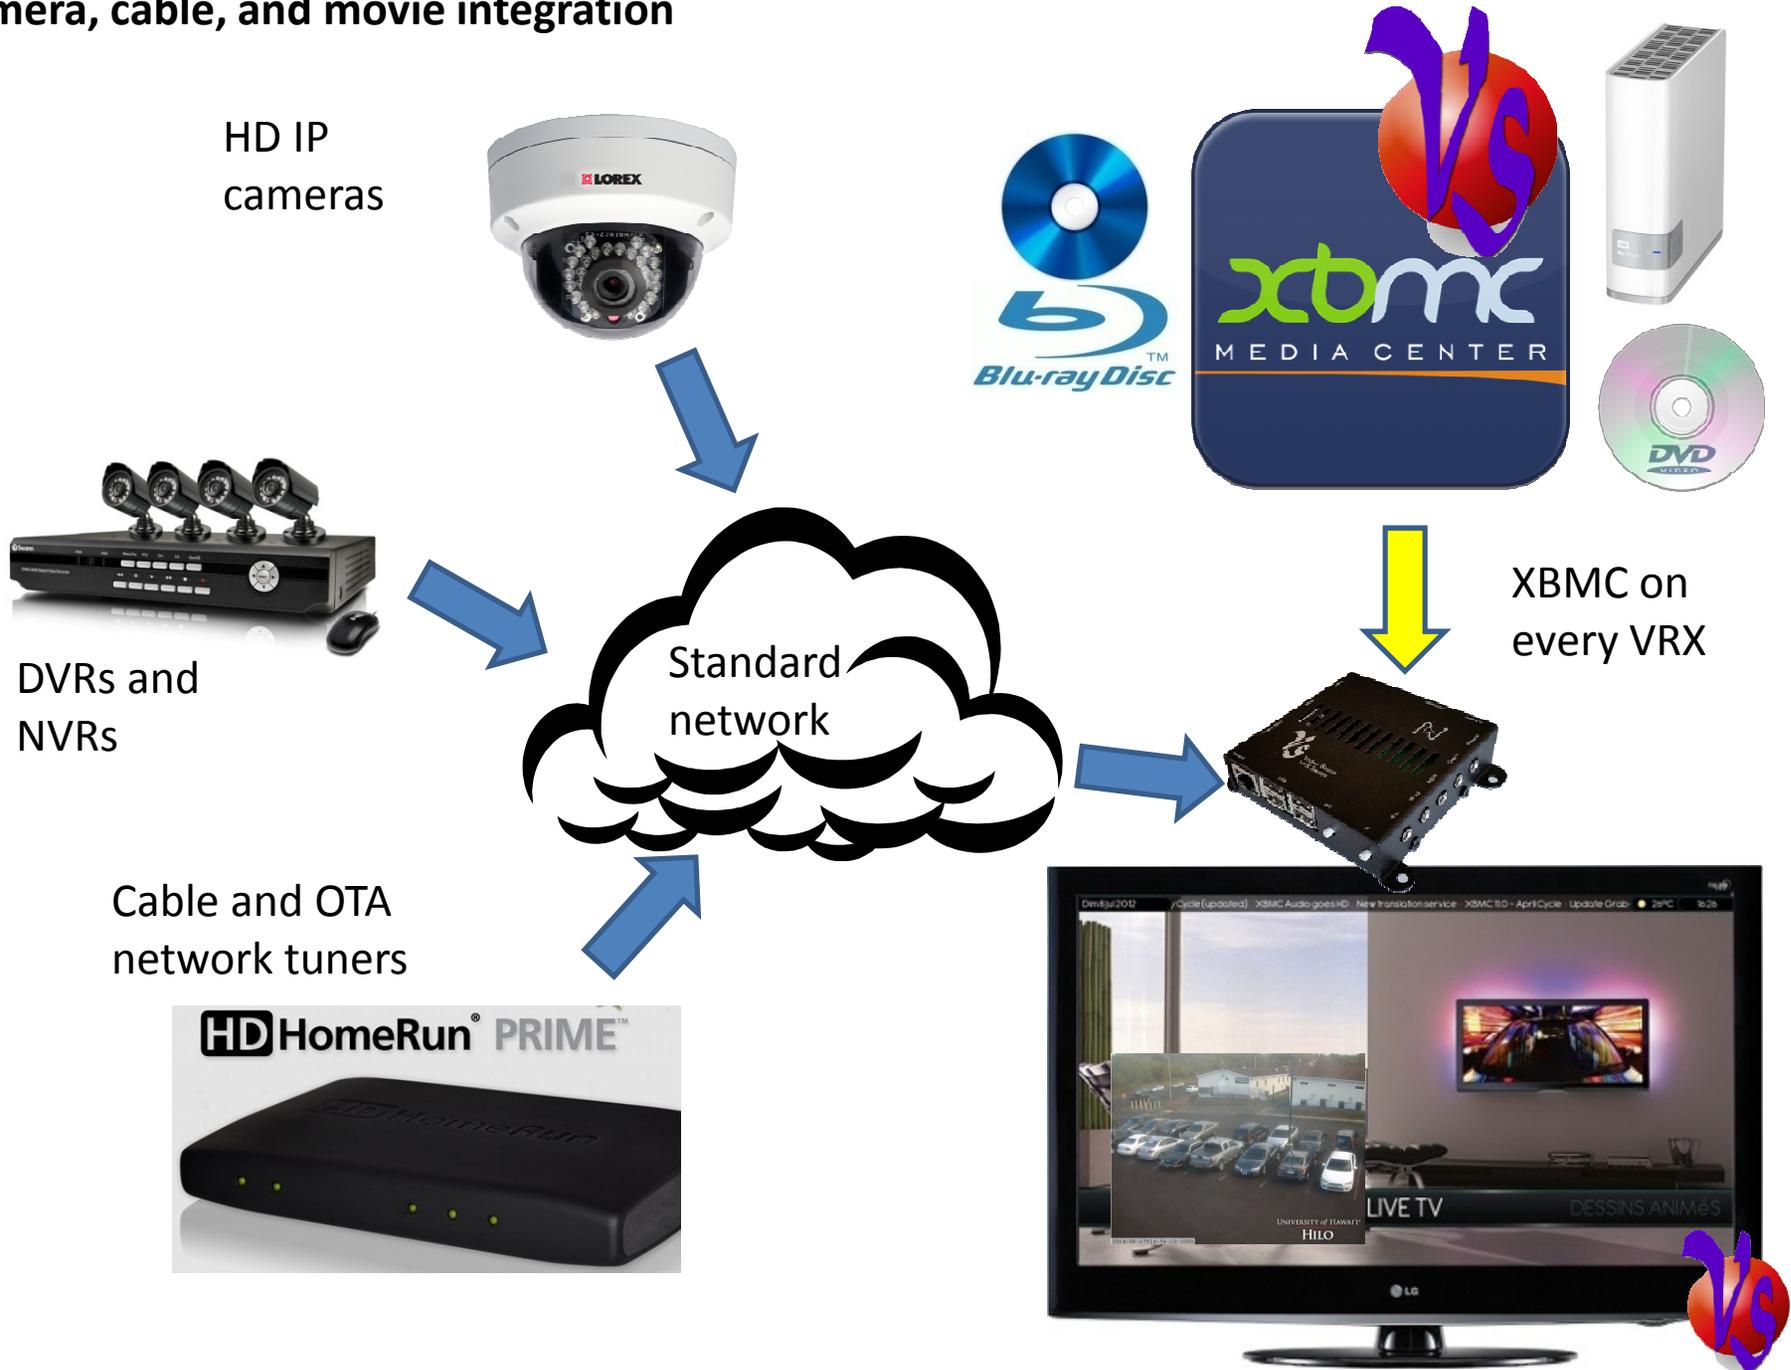

TV speakers  
Sound bar  
AVR  
Locally amplified speakers

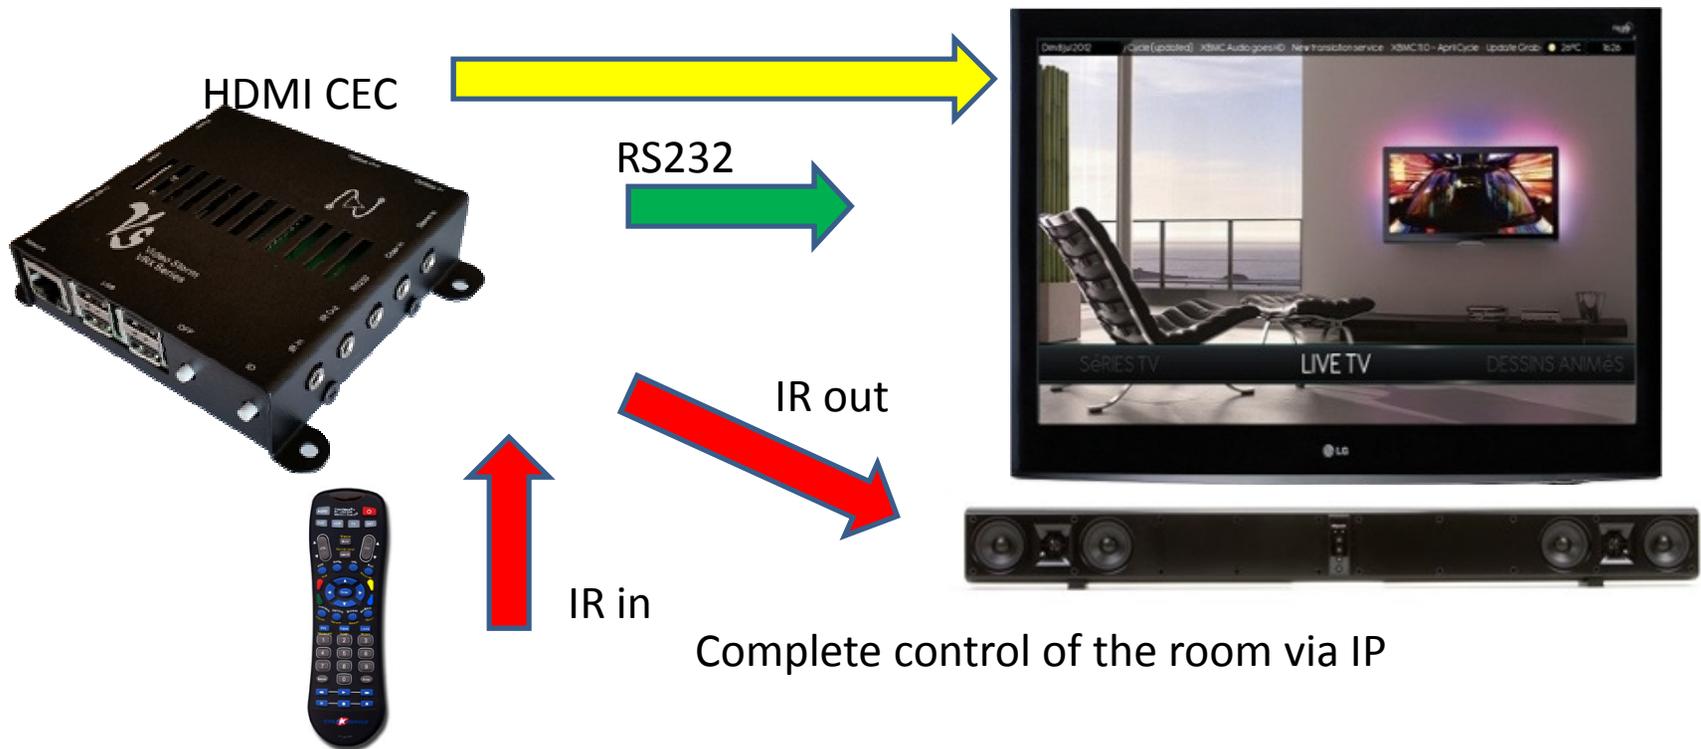

## Flexible installation

# Camera, cable, and movie integration

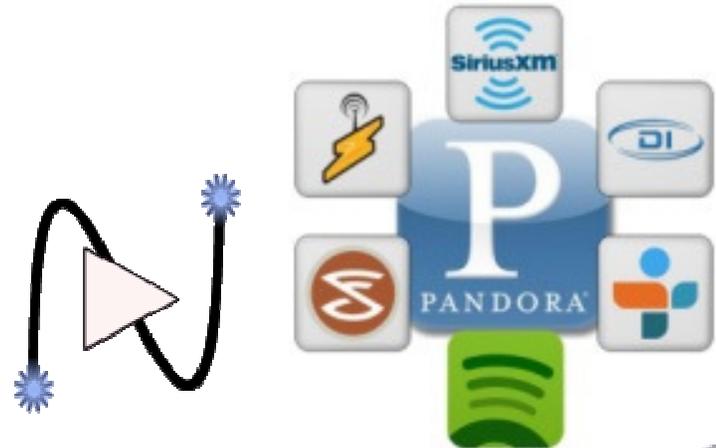

# IR, RS232, and CEC extenders via IP

## NetPlay Audio integration

CMX-A2-NAB has 8 stream NetPlay audio integration for all your centrally wired speakers

Each VRX has single stream NetPlay Audio integration for *audio & video rooms* with local speakers

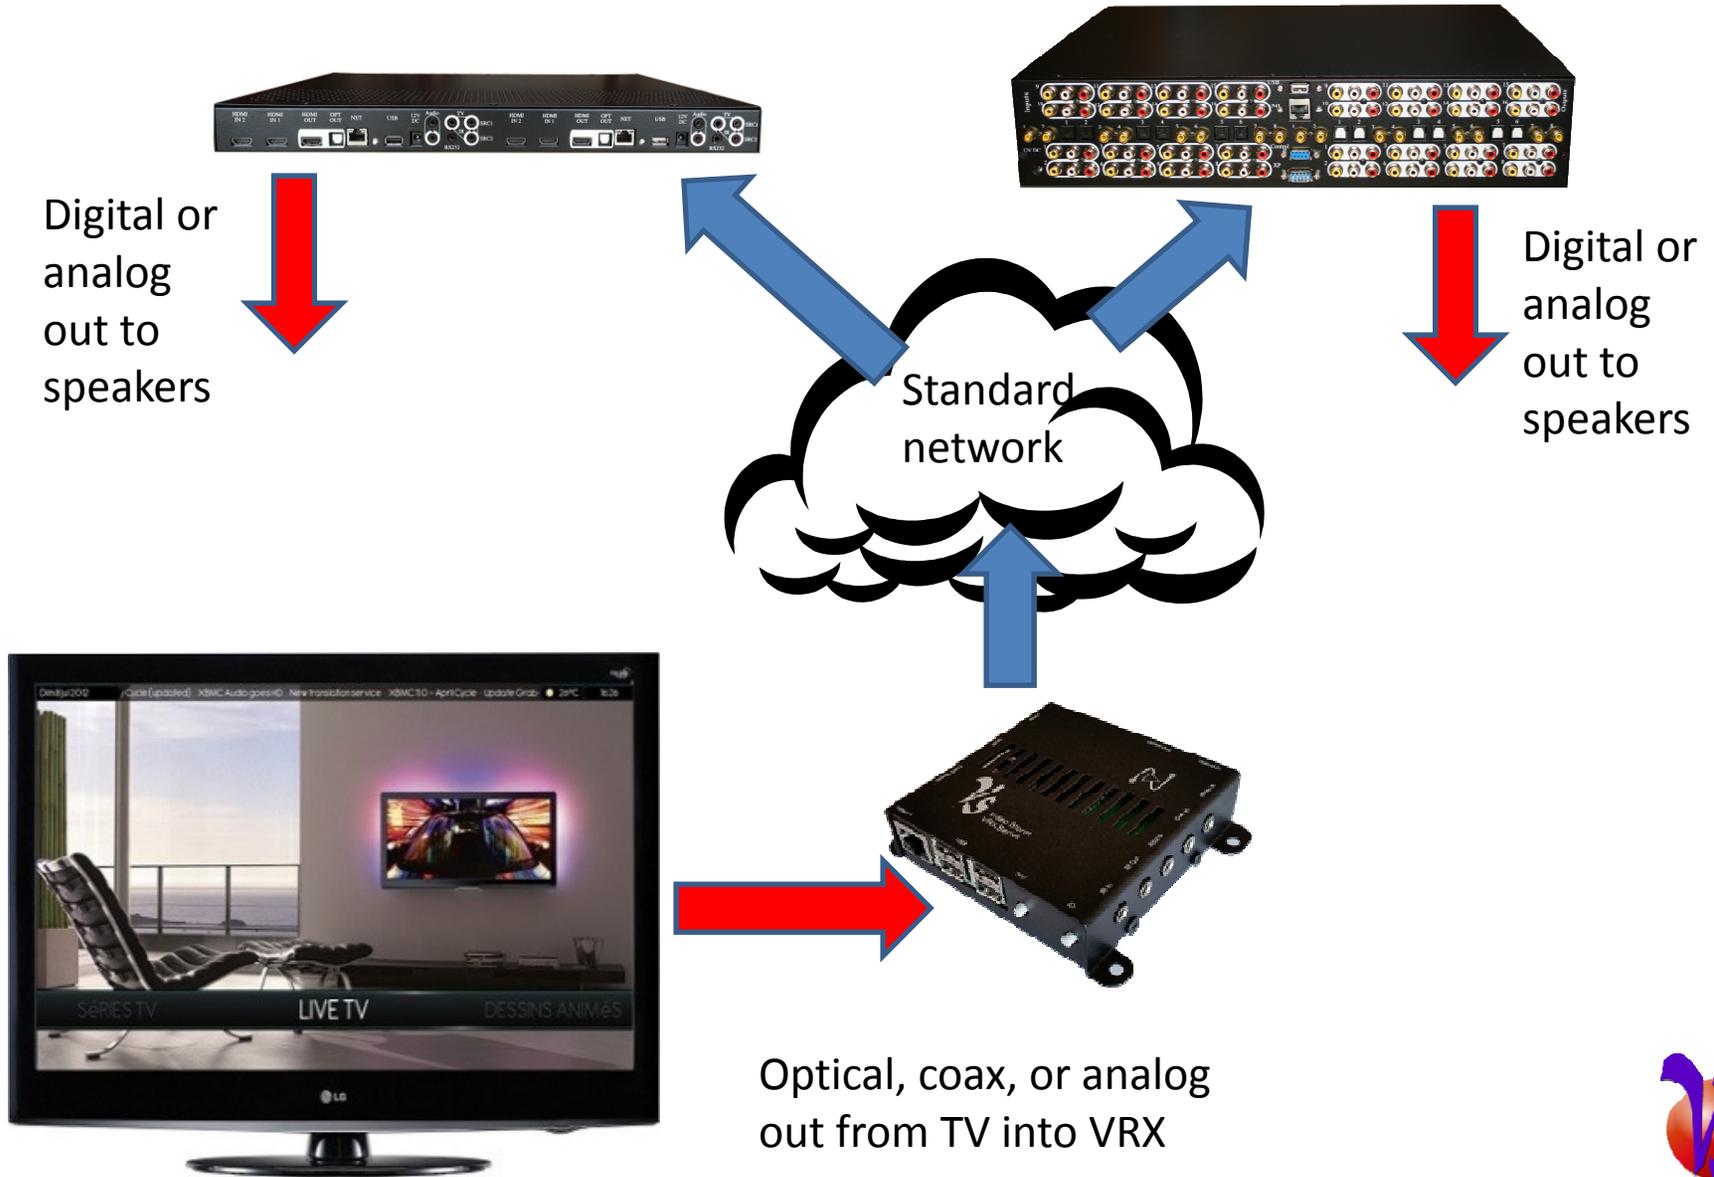

NBX has single or dual stream NetPlay Audio integration for *audio only rooms* with local speakers

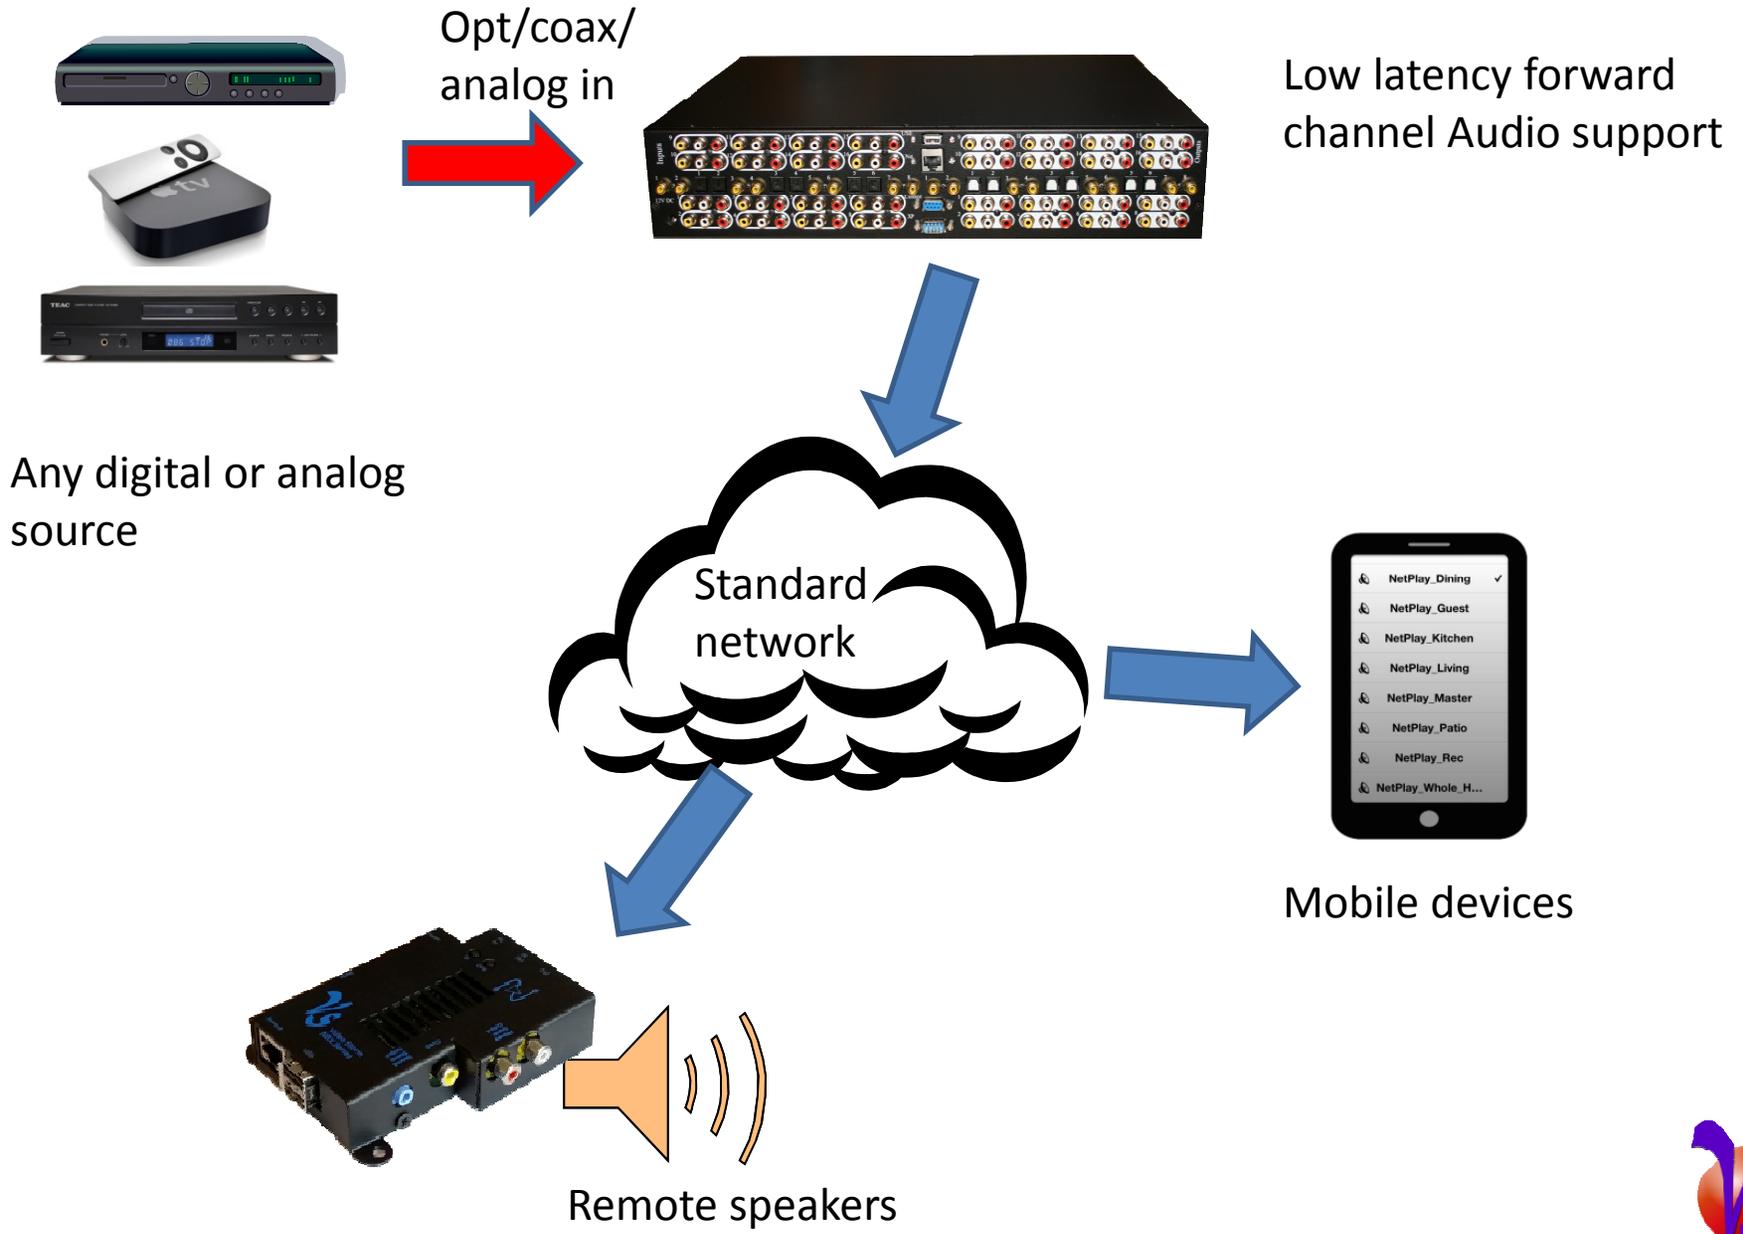

# Audio return channel

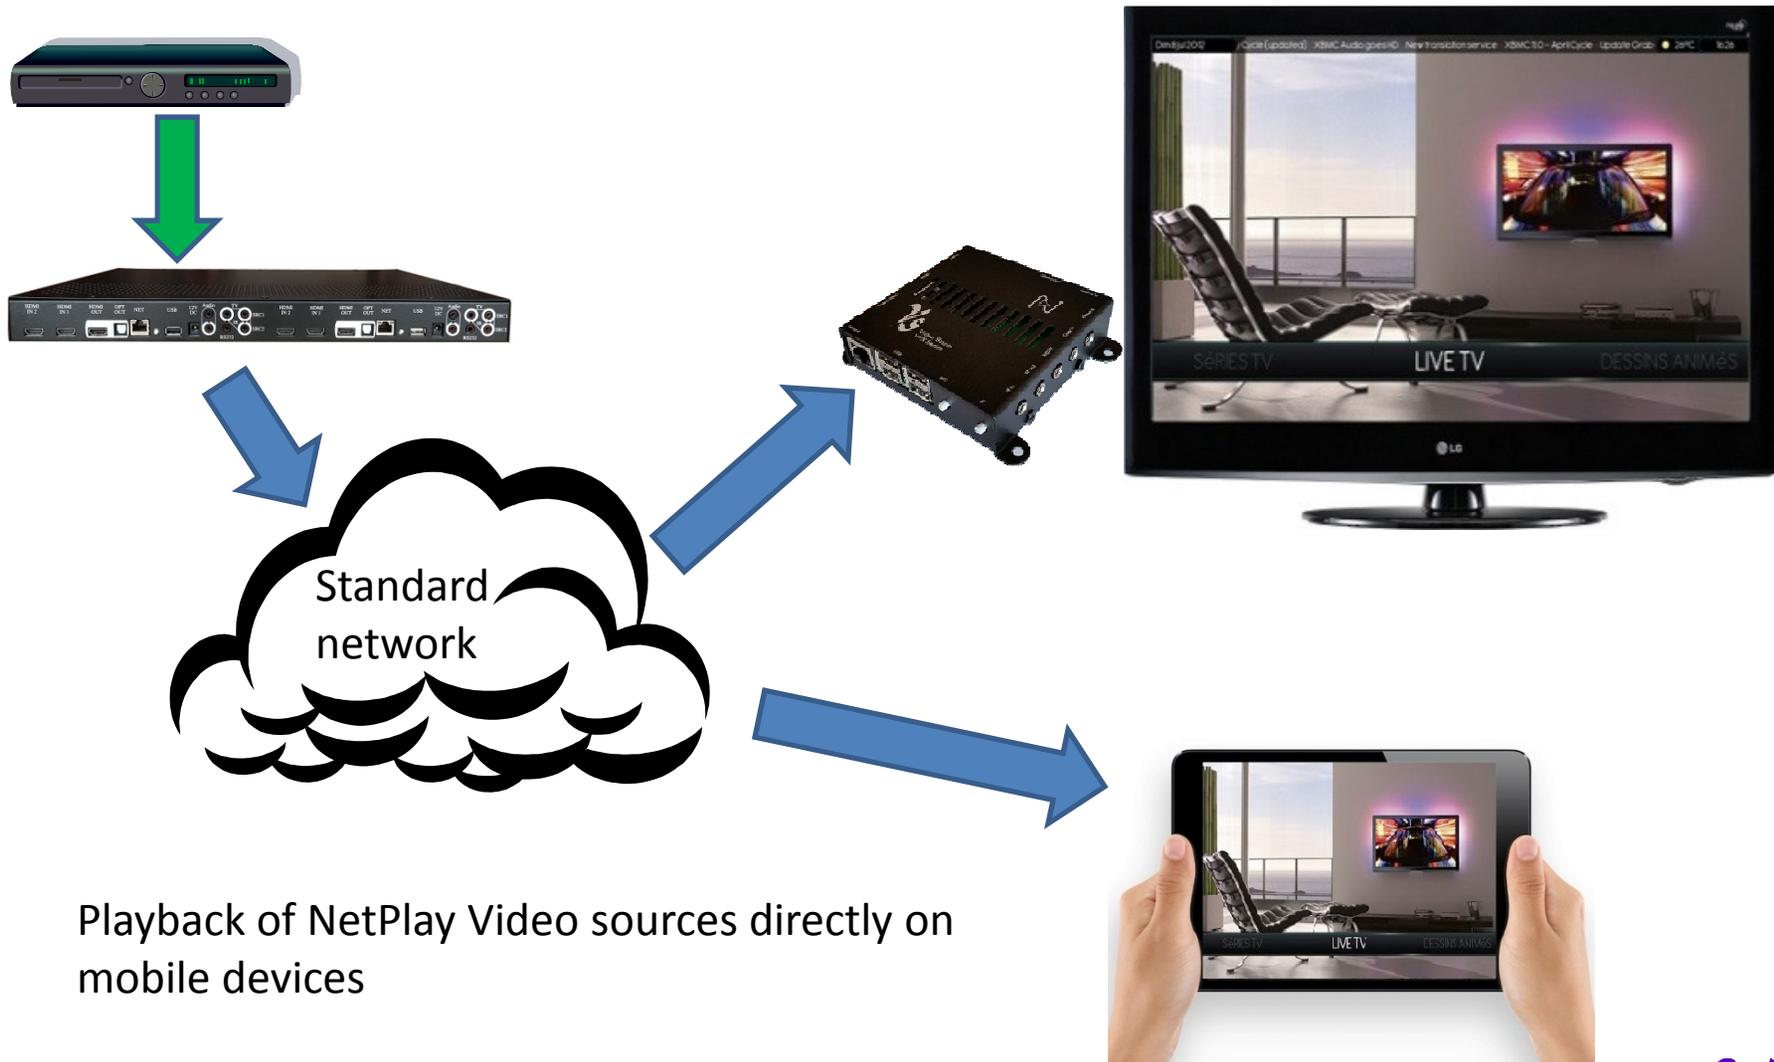

Low latency audio return channel via network to VTX or CMX-A2-NAB

# Digital audio transport

## Mobile devices

Playback of NetPlay Video sources directly on mobile devices

## Programmable OSD

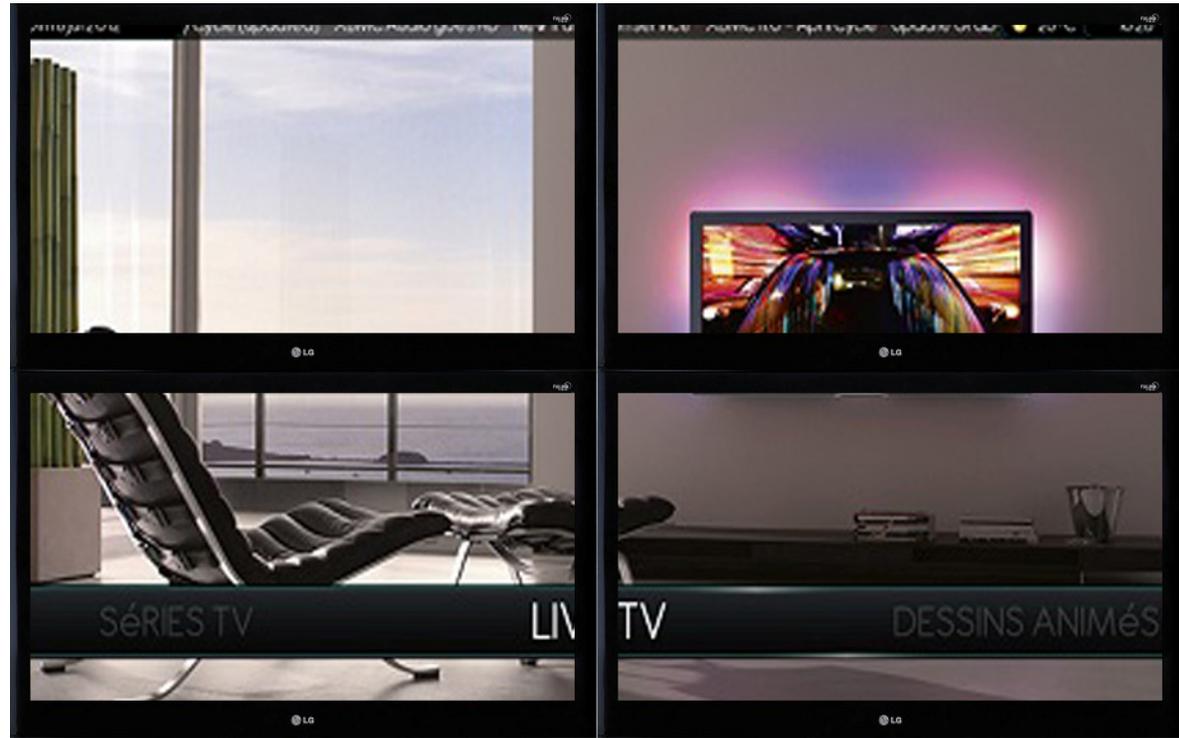

Trigger live video or text OSD via programming  
(or both)

## Video walls and multi display

Supports any video wall configuration (2x2 shown)

Multi display can show up to 9 live streams on a single screen (screen layout configurable)

# GUI modes

NetPlay Video has four background GUI applications to choose from

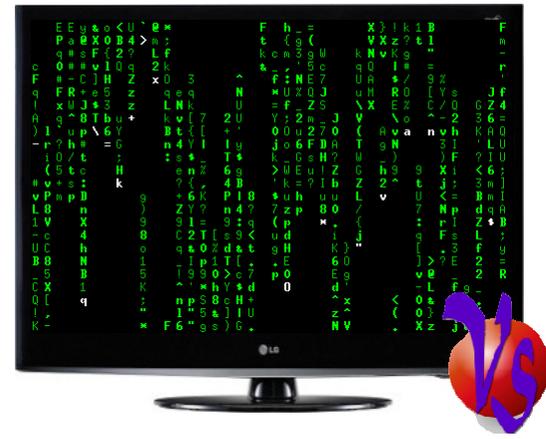

XBMC Media Center

Digital signage application

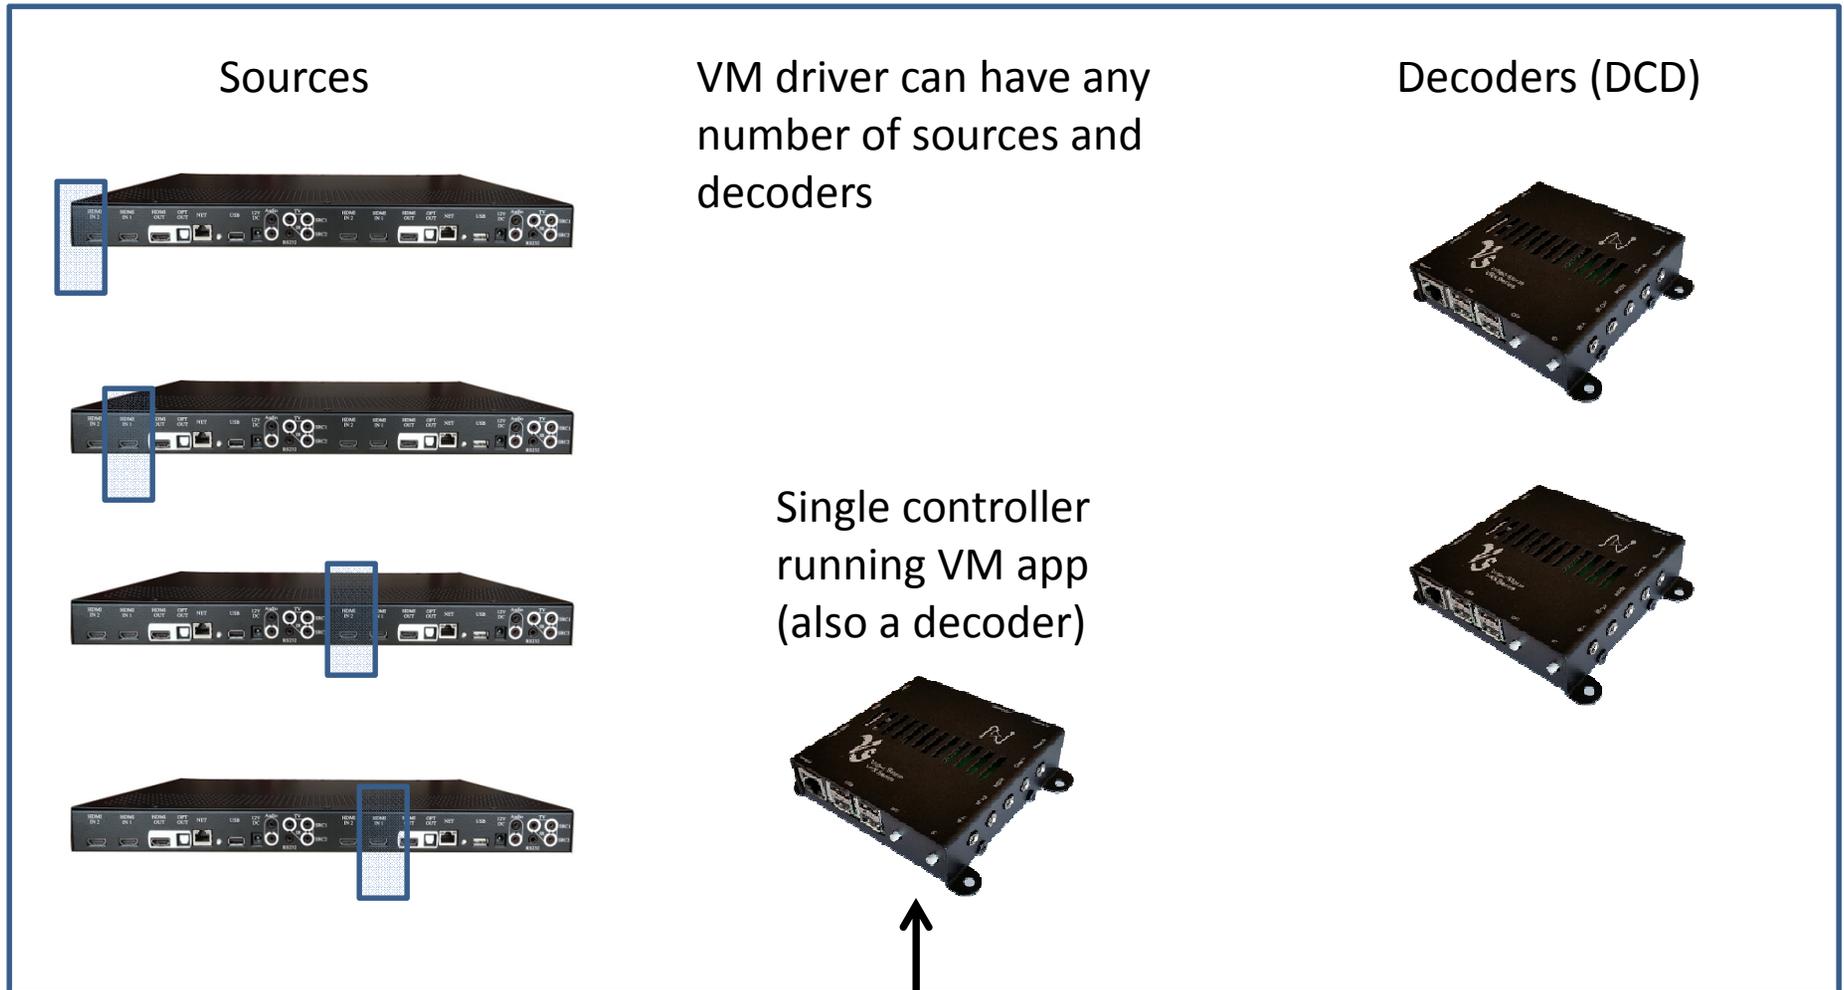

Scripted display application

cMatrix screen saver

# Virtual Matrix explained

## Netplay Virtual Matrix driver

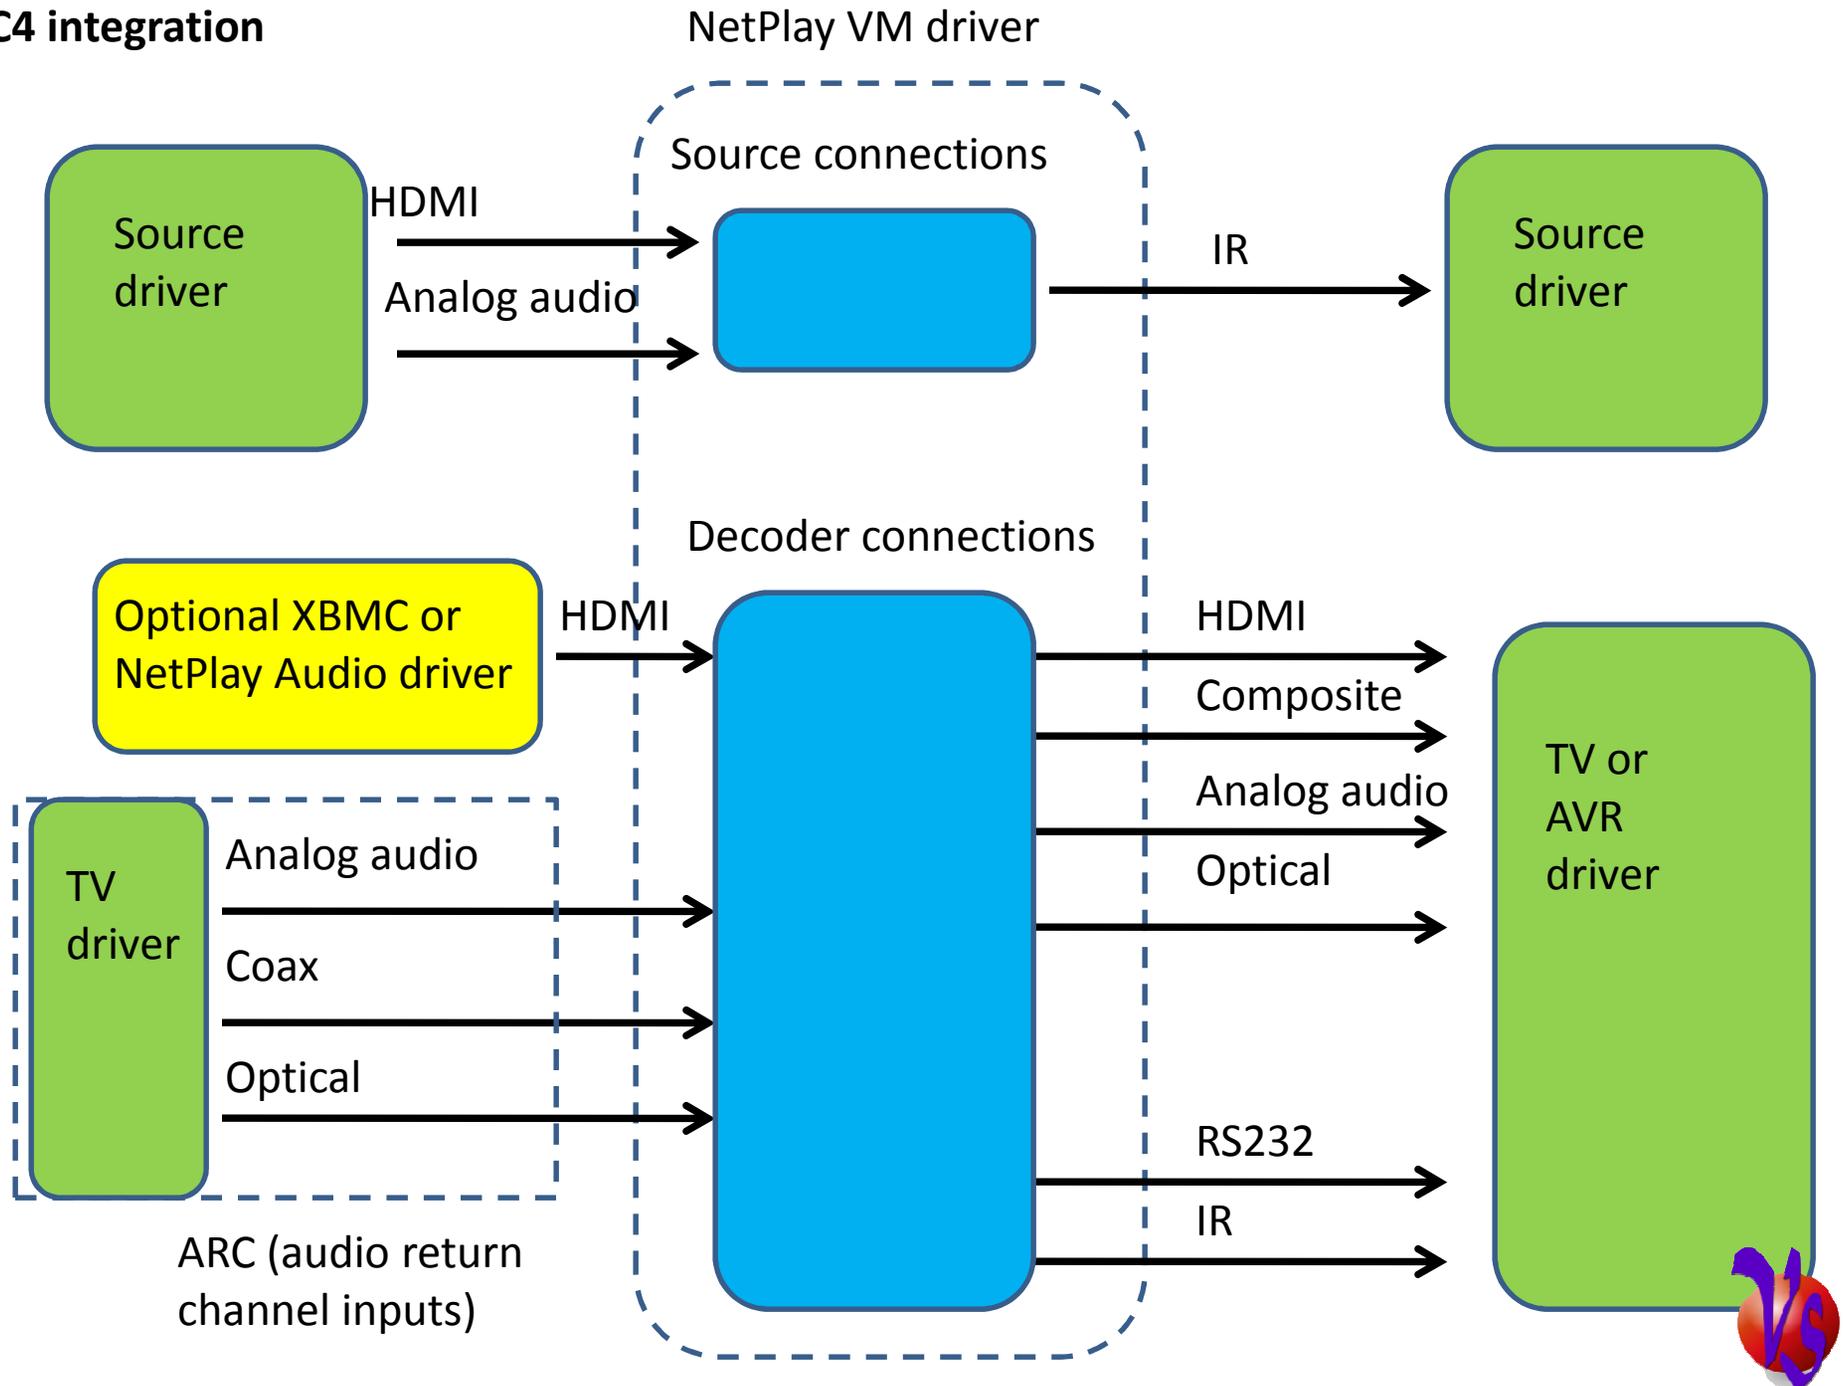

Single controller running VM app (also a decoder)

Single Ethernet UUID binding to control entire system

# C4 integration

## Future Proof

NetPlay Video uses multi-resolution video and multi-format audio streaming

- NetPlay always delivers the best video and audio formats to every display
- 4K sources can send 4K to new tvs while sending 1080p to older tvs
- You never have to replace the ENTIRE SYSTEM to support new sources or tvs
- NetPlay is the only technology flexible enough to really be future proof
